ABSTRACT

A garment for therapeutic comfort to the wearer's lower body. The garment includes an outer layer that is usually of color or design in order to be aesthetically pleasing, and an inner layer that is in contact with the wearer when worn. The garment includes a plurality of upper and lower pocket members selectively positioned on the front, rear, outer, and inner sides of the garment, the pocket members each include a chamber in communication with an opening that can be in parallel or perpendicular with the length of leg portions of the garment. Each of the pocket members are defined between the outer and inner sides of the garment, and are seized for receiving a cold compression.
